SUMMARY

Data Analyst with expertise in SQL, Python, and data visualization. Experienced in analyzing large datasets, identifying trends, and improving data-driven decision-making. Skilled in Tableau for data visualization and report generation. Proven ability in data analysis and effective communication. Strong team player with a passion for data-driven storytelling.

EXPERIENCE

Machine Learning Engineer

Unified Mentor

July 2025 – August 2025, India, gurugram

- A deep learning-based image classification project that identifies animals from images using Convolutional Neural Networks (CNNs) with Transfer Learning and PyTorch.
- This project is built with modular architecture and a friendly Streamlit UI for end-user interaction.
- Build a system that classifies an image into animal categories** using a trained model on a provided dataset of 224x224 RGB images.
- Developed and deployed a machine learning model for sentiment analysis, achieving 95% accuracy.
- The system also allows batch predictions, visual insights, and downloadable results – ideal for dashboards, analysts, or fraud control teams.

Data science intern

CoreLine Solutions

June 2025 – July 2025, India, Bangalore

Developed a Streamlit-powered web app for user feedback analysis, leveraging NLP and Hugging Face Transformers to categorize sentiment with 98.5% accuracy.

HR Manager

Cream Jobs Consultancy

April 2024–December 2024, India, Ahmedabad

Achieved a 75% increase in interview footfall from Tech Giants and Industry Leaders by implementing Referral Programs, Social Media strategies, and Networking Events.

Financial Advisor

Star Health Insurance

January 2016–December 2023, India, kolkata

- Enhanced customer satisfaction scores by 15 points through Salesforce CRM implementation.

PROJECT

online car rental

N/A

- The users in need of a car can rent cars for a few days at a minimal amount rather than buying a new car.
- It is also important for the users that already have a car, they can also rent any vehicle for a day or so.
- This system not only will help the people in need of a car as mentioned above but also for the car dealers or sellers who can give their cars or vehicles on rental basis and earn a lot out of it.
- Python Online Car Rental System: The purpose of this project is to make rented cars or vehicles available for the people who want to travel alone or with their family and friends from one place to another.

Tableau-Project-Comparison-of-Region-Based-on-Sales

N/A

- The director of a leading organization wants to compare the sales between two regions.
- He has asked each region operators to record the sales data to compare by region.
- The upper management wants to visualize the sales data using a dashboard to understand the performance between them and suggest the necessary improvements.
- Objective: Help the organization by creating a dashboard to visualize the sales comparison between two selected regions.
- Datasets: Sample Superstore.

Employee Performance Review: ScienceTech

N/A

- The employee performance review process at ScienceTech is a dynamic and iterative approach aimed at maximizing individual and organizational potential.
- By leveraging data-driven insights, regular feedback, and targeted interventions.
- We empower our employees to excel in their roles, drive innovation, and contribute to the company's success.

- Continuous monitoring, evaluation, and adaptation ensure that our performance management practices remain aligned with evolving business needs and industry trends.

feedback-analyzer

- N/A
- Zero-shot feedback classification using BART Sentiment analysis using DistilBERT Urgency scoring and keyword extraction Language detection (multilingual feedback support) CSV upload & interactive filtering Model confidence score display Future enhancements: PDF reports, alert system, webhook integration.

Animal Image Classifier Project

- N/A
- Objective - Build a system that classifies an image into one of 15 animal categories using a trained model on a provided dataset of 224x224 RGB images.A deep learning-based image classification project that identifies animals from images using Convolutional Neural Networks (CNNs) with Transfer Learning and PyTorch.
 - This project utilizes a modular architecture and a friendly Streamlit UI for end-user interaction.

Fraud Transaction Detection System

- N/A
- Objective A Streamlit-powered machine learning web app that predicts whether a financial transaction is fraudulent or legitimate, based on historical patterns.
 - The system also allows batch predictions, visual insights, and downloadable results- ideal for dashboards, analysts, or fraud control teams.
 - The UI and visual elements are designed to feel modern, responsive, and secure like a live terminal dashboard for transaction fraud detection.

AAL Sales Analysis

- N/A
- Mini data analysis project of company AAL using numpy, pandas, scipy, matplotlib and seaborn.
 - The data file, AusApparalSales4thQrt2020.csv, originates from Simplilearn.com.

EDUCATION

Master of Business Administration(Finance)

Jaipur National University • India, Rajasthan • 2017

Bachelor of business administration

Madurai Kamaraj University • India, Madurai • 2014

senior secondary school examination

National institute of open schooling • India, kolkata • 2011

Madhyamik (secondary examination)

Springdale High School • India, Kalyani • 2001

COURSEWORK

Post Graduate Program in Data Science

N/A • 2024 • Data Science

Applied Generative AI Specialization

N/A • 2025 • Generative AI

python for Data Science

N/A • 2024 • Python

AWARDS & HONORS

Kaggle Titanic Machine Learning Competition

- N/A • N/A
- In this competition, the goal is to perform a 2-label classification problem: predict which passengers survived the tragedy Kaggle offers two datasets.
 - One training (the labels are known) and one testing (the labels are unknown).
 - The goal is to submit a file with our predicted labels saying who survived or not.
